Ingredients

Ingredients

Select 100% Arabica Coffee

PREMIUM coffee extract imported from India. Energy-premium imported spray dried coffee; freeze concentrate yields great aroma/coffee body; coffee delivers a potent blend of polyphenols which thwart oxidative stress. The highest quality and best tasting instant coffee in the world.

Vinitrox™ (Fruit Extracts)

A combination of apple and grape extracts that produce a synergistic effect to increase the Nitric Oxide levels in the body, promoting vasodilation nutritional support. This supports circulation, blood flow, enhances performance and increases endurance. Vinitrox is also an extremely powerful antioxidant.

Juglans Regia Bark Extract

An isomer, which is closely related to Octodrine, has been included in the formula to get the “full-spectrum” effect of nootropic ingredients. With a different nutritional structure, this extract works in harmony with Octodrine to greatly increase and sustain the nootropic effect.

OCTODRINE

Clinical test studies show this ingredient to be effective in the breakdown of fat cells and weight loss. Containing beneficial properties, Octodrine effectively helps to boost and support the body through a natural balancing process of various metabolic functions. This rare nutrient provides enormous weight control benefits.

It also enables anabolic response, which is a fat burner and controls weight. Additionally, it improves athletic performance and helps increase mental focus and clarity.

This ingredient naturally supports both dopamine and norepinephrine through activation of trace amine associated receptor 1, while temporarily preventing their reuptake into the presynaptic nerve. This stops their ability to bind to target receptors, keeping dopamine and norepinephrine active longer, thereby producing the stimulant-like effect.

L -Theanine

Known as the “feel- good” amino acid, science shows that L-Theanine provides and assists with the calming effects on the brain, by nutritionally increasing the levels of serotonin and dopamine. Often used in many weight control products, it naturally provides a relief from anxiety and stress, which is a common cause for over-eating and weight gain. L-theanine is thought to weaken the negative side

effects of caffeine. It's often used as part of a stack. "Caffeine plus L-theanine" and is one of the world's most popular nootropic stacks. L-theanine is an amino acid that can purportedly provide anti-stress and anti-anxiety effects ("anxiolytic"). The amino acid is derived from tea leaves. L-theanine is not common in a standard diet - which is why most of us get our L-Theanine content from supplements and our diet (it's found in green tea, for example).

PEA (Phenylethylamine HCL)

Found in the plant kingdom, this ingredient functions as a neurotransmitter for the internal body communication providing the road for a better balanced system.

Originally found in chocolate, it supports and promotes the feeling of fullness and satisfaction.

Additionally, it stimulates neurotransmitters by releasing dopamine, improves mood, and increases alertness, focus and concentration.

Alpha- Glyceryl Phosphoryl Choline

Recognized as a safe and healthy natural choline ingredient, Alpha-GPC encourages brain alertness and memory function. It is also a critical nutrient for muscle tone and helps with body shaping.

Alpha GPC is a water-soluble choline ingredient. Choline is important to growth and early development, and beyond those stages, it is important for optimal functioning of our brain and liver. The composition is similar to that of B-vitamins. Most people report greater mental clarity, enhanced memory and the ability to learn new things increases. It is generally held that 90 percent of the population does not get recommended daily allowance of choline through dietary sources. This basically means almost every person you pass on the street is likely a candidate who could benefit from using Alpha GPC. With 90 percent of the population not getting enough choline, it is easy to understand why cognitive disorders, and largely those that occur with the onset of age, are on the rise.

Taking Alpha GPC makes you feel mental clarity and better able to remember information. Your brain stores memories and information, and the greater the neurotransmission rate, the better we can recall those details. This is largely what is reported by those who are taking Alpha GPC. It helps people regain a sense of well-being often lost as we age.

Caffeine

Caffeine is the most recognized ingredient associated with coffee. It's a natural occurring stimulant found within the coffee bean. Over the last few years, many positive health benefits of caffeine have been identified, such as providing more energy, sharper memory, increased athletic performance and longevity.

These benefits have been recognized by the National Coffee Association and accepted in the nutritional field as a support for a healthy lifestyle.

However, everyone's body has a different tolerance to caffeine. Science has said that certain people are fast metabolizers, while others are slow, depending on factors, such as body chemistry. To receive the full health benefits, one must become an educated coffee drinker and develop their own personal taste and tolerance.

According to MayoClinic.com, caffeine may stimulate thermogenesis, which is one way your body generates heat and energy. Because the thermogenic effect generates heat, thermogenesis burns calories, according to Elisa Zied, a registered dietitian in New York City and author of "Nutrition at Your Fingertips." Caffeine may slightly boost weight loss or prevent weight gain, confirms MayoClinic.com.

Nettle Root Extract

Protecting the cell membrane structure and keeping the cholesterol in balance is an important step in maintaining good health. The Nettle Root Extract is a plant based herbal extraction that aids with reducing blood sugar levels. This ancient herb assists and supports the body in maintaining good cholesterol by influencing how the body responds to sugar and nutritionally balances the cholesterol ratio.

Octopamine

When you increase the body's metabolism, it results in helping the body burn calories and results in the loss of body weight. Octopamine, which is found naturally in various foods, provides support and activity in helping to increase fat cell breakdown and continued fat burning.

It also stimulates Beta-3 Adrenergic Receptor, which is responsible for lipolysis (fat breakdown), and thermogenesis (fat burning).

Chromium Polynicotinate

Most of us aren't getting enough chromium due to the lack of chromium in our soil and water. Many of us also have a diet high in processed foods, white flour and junk food. Chromium regulates insulin, which helps reduce sugar and carbohydrate cravings.

Chromium polynicotinate has been shown to possess greater biological activity than other chromium picolinate in weight loss supplements. Chromium Polynicotinate is a mineral required for regulation of blood sugar. It is involved in the metabolism of glucose and is essential for energy and weight control.

Supplement Facts			
30 Servings Per Container			
Serving Size 1 Scoop (2.25 g)			
Amount / Serving		%DV*	Amount / Serving
			%DV*
Calories	10		
Total Carbohydrate	1g	1%	Proprietary Blend † 2.2g
Protein	<1g	1%	100% Arabica Coffee, L-Theanine, PEA (Phenylethylamine HCL), VINITROX** (Apple & Grape Polyphenols), Octodrine,
Chromium	200mcg	167%	Alpha-Glycerol Phosphoryl Choline (A-GPC), Juglans Regia
(As Chromium Polynicotinate)			Bark Extract, Nettle Root Extract, Octopamine.
Caffeine	100mg		

* Percentage Daily Value based on a 2000 calorie diet. Vinitrox is the trademark of Nexira**
 † Daily Value not established.

Good Manufacturing Practices:
 All revital U products are US manufactured. To meet our high standard requirements, all facilities follow strict FDA and NSF regulations, as well as the classification seal of cGMP. From start to finish, each product is carefully crafted and the highest rated ingredients are selected, to assure we provide you with purity in every cup!
